IDENTITY ADMINISTRATION

simeio
Identity, intelligently managed.

If an employee leaves, their access to company accounts stays behind.

The Simeio Difference

We are a managed identity services provider, providing a complete end to end solution to help customers manage their identities. We go beyond just provisioning and also provide services like accessing in the cloud and also on prem. We can help with IaaS/PaaS/SaaS environments.

This includes account requests, approval work-flows, automated provisioning, self-service, pass-word resets and access termination.

You get the latest, best-in-class IAM technologies and reliable 24/7 monitoring and support – with no hardware or capital investments, lengthy integra-tions, migrations or upgrades required. We'll address these serious and rapidly changing threats while minimizing the impact on your organization and your employees.

Simeio Advisory Services

Our Advisory Services team enables our customers to quickly launch or expand their privileged identity programs, achieving on average a 60% faster time-to-market than traditional PIM implementations.

Free Risk Assessment

Assess your IAM risk with a complementary quick-start risk assessment workshop delivered by our subject matter experts.

We use industry-forged consultative processes and automated scripts to assess the scope of your privi-leged security risk. This can help you to prioritize initiatives and educate your business on the risks, while building a business.

Simeio Fast Facts:

- 100 million global identities managed
- We focus <u>solely</u> on Identity & Access Management
- Established 2008

Identity Administration: Why You Need It

Identity management, also known as **identity** and access management (IAM) is, in computer security, the security and business discipline that "enables the right individuals to access the **right resources at the right times** and for the right reasons."

- Audit findings – User access to resources without approval trails
- Poor user experience
- Time consuming process to grant users access to systems
- Loss of productivity
- Frequent help desk calls

How You'll Benefit

- **Improved User Experience.** By enabling automatic logins, they can more easily move from system to system without having to remember multiple logins and passwords

- **Enhanced Security Profiles.** IAM systems can authenticate and authorize users based on the access level indicated in their directory profiles. IAM sys-tem can also automatically control user access using other factors to specific functions of your system.

- **Easy, Portable Access.** Allows users to access to all interconnected systems, regardless of where the user is physically located. This can be especially use-ful for large companies doing business

An Identity Administration Client Success

"50% reduction in manager's time to complete certification requests."– Vantiv

The Simeio Connect and Protect focus gives you a complete range of customized solutions, proven effective for over 100 million identities

Identity Administration

Simeio can manage your end-to-end identity lifecycle for employees, partners, customers and devices. We'll handle all account requests, approval workflows, automated provisioning, self-service, password resets and access termination.

Business Problems Solved: Company data and access security, SOX Compliance

Privileged Identity Management

Now you can securely manage passwords & SSH keys for SaaS and on-premise applications through auto-discovery, privileged check-out, session recording & threat analytics. Simeio will automate compliance reporting with integration to existing access governance & multi-factor authentication.
