

IF AN EMPLOYEE LEAVES, THEIR ACCESS TO COMPANY ACCOUNTS STAYS BEHIND.

The Simeio Difference

Simeio Identity Administration (IA) encompasses the entire lifecycle of an employee: they are hired, they get promoted, they change departments and some even leave. When a worker's role evolves, their access to your company's information evolves with them. The same goes for your customers, their logins, user experience, and security is every bit as important as your internal employee access.

With Simeio IA, we eliminate those concerns by managing the end-to-end identity management lifecycle for employees, partners, customers and devices. The ultimate benefit? When an employee leaves, their access to your business data doesn't walk out the door with them.

Simeio Professional Services

Our Advisory Services team enables our customers to quickly launch or expand their IAM Programs, achieving on average a 60% faster time-to-market than traditional IAM implementations.

Free IA Assessment

Assess your Identity Administration Program with a complimentary quick-start assessment workshop delivered by our subject matter experts.

We use industry-forged consultative processes and leverage our Simeio-defined best practices to assess the scope of your Identity Administration Program. This can help you prioritize initiatives and educate your business on how to best cover the lifecycle of your employees, partners, customers and devices to keep your organization safe and compliant.

SIMEIO FAST FACTS

- 150,000,000+ global identities managed
- We focus solely on Identity & Access Management
- Established 2008

Why You Need It

Identity Administration (IA) covers the entire lifecycle of the identities in your environment. From the beginning of a relationship with an employee or customer to the end and all the stages in between, you need to be sure that their access and user experience changes as they change.

- **Audit findings – User access to resources without approval trails**
- **Poor user experience**
- **Time consuming process to grant users access to systems**
- **Loss of productivity**
- **Frequent help desk calls**

How You'll Benefit

- **Improved User Experience.** By enabling automatic logins, they can more easily move from system to system without having to remember multiple logins and passwords.
- **Enhanced Security Profiles.** IAM systems can authenticate and authorize users based on the access level indicated in their directory profiles. IAM system can also automatically control user access using other factors to specific functions of your system.
- **Easy, Portable Access.** Allows users to access to all interconnected systems, regardless of where the user is physically located. This can be especially useful for large companies doing business.

An Identity Administration Client Success

“50% reduction in manager's time to complete certification requests.”

OUR CONNECT AND PROTECT FOCUS GIVES YOU A COMPLETE RANGE OF CUSTOMIZED SOLUTIONS, PROVEN EFFECTIVE FOR OVER 150 MILLION IDENTITIES. GET #SIMEIOSAFE

IDENTITY ADMINISTRATION

Simeio can manage your end-to-end identity lifecycle for employees, partners, customers and devices. We'll handle all account requests, approval workflows, automated provisioning, self-service password resets and access termination.

Business Problems Solved: Faster onboarding and offboarding, better controls, compliance and cost improvements through automating manual processes and automated access termination.

ACCESS MANAGEMENT & FEDERATION

Get peace of mind and much more secure authentication. Simeio can implement a seamless single sign-on (SSO) to any on-premise application or network resource. Enjoy secure access from any device, supporting all federation standards. Educate your business on the risks, all while building your business.

Business Problems Solved: Too many sign-ons, frustrating user experience.

DATA SECURITY & LOSS PREVENTION

Security solutions for all types of databases as a hosted managed service. Set up policies to discover and prevent unwarranted actions on your sensitive content and data in the cloud. Centrally manage and enforce data management policies, alerts, logs and data egress blocking.

Business problems solved: Ensuring that private data remains private.

SECURITY & RISK INTELLIGENCE

Deploy and maintain security and behavioral analytics with Simeio. User and entity behavioral analytics can deliver continuous risk monitoring. Sophisticated machine learning algorithms enable real-time detection of breaches and threats.

Business problems solved: Ensuring that people are using their access appropriately.

ACCESS GOVERNANCE

Let Simeio automate compliance and protect your enterprise against threats with solutions for access certifications, segregation of duties enforcement, role management, and identity proofing.

Business Problems Solved: SOX compliance, time-consuming manual access review, reduce audit findings or compliance violations.

PRIVILEGED IDENTITY MANAGEMENT

Now you can securely manage passwords & SSH keys for SaaS and on-premise applications through auto-discovery, privileged checkout, session recording & threat analytics. Simeio will automate compliance reporting with integration to existing access governance & MFA.

Business Problems Solved: Identifying privileged access, reduced risk by improved controls, integration of privileged accounts into governance platform.

CORE DIRECTORY SERVICES

Simeio can help you manage your identities on a global scale, with high performing and flexible virtual directory solutions. Enable secure and seamless access to web and cloud solutions. Full service includes platform integrations, workflow configurations and directory management.

Business Problems Solved: Single view of identity in highly complex environment to enable secure and seamless access to web and cloud solutions, giving right access at any time with any device.

CLOUD SECURITY

Protect critical cloud infrastructure with Simeio Solutions that can detect shadow IT. Automate cloud security admin, including SaaS identity administration and SaaS configuration monitoring. Implement end-to-end control through real-time cloud threat intelligence.

Business problems solved: Reduction in Shadow IT and improved security around employees use of the internet.
